SKILLS

- **Languages:** C++, C, Python, Swift, Objective-C, Dart, Javascript, Typescript
- **Tools:** Flutter, Git, Flask, React, XCode, VSCode, AWS, Grafana, Cursor, Copilot, Claude Code

EXPERIENCE

GEICO

July 2025 - Present

Software Engineer I | Brooklyn, NY

- Migrate 7+ core native iOS views (edit coverage, quote recall, document uploads) to Flutter, contributing to an org-wide effort spanning 70+ views that modernize customer experience and improve app functionality.
- Write and maintain 160+ BDD tests (Appium, Headspin) run before every release to catch regressions across iOS and Android on physical hardware, fixing any failures identified prior to shipping.
- Serve as release configuration manager for a bimonthly release cycle supporting 23M+ monthly users, cutting branches, coordinating late merges, building release candidates, and publishing to the App Store.
- Monitor production health via Grafana, Firebase, and Quantum Metric across 1M+ daily sessions, rolling out my own features behind feature flags for safe, reversible deployment.
- Use Cursor extensively to debug faster, ramp up on unfamiliar codebases, draft unit tests, and review PRs, improving personal development velocity while maintaining full control over architecture and code quality.

GEICO

June 2024 - August 2024

Software Development Intern | Chevy Chase, MD

- Delivered software updates to a high-traffic iOS app with over 20 million users and more than 1 million daily logins, improving app stability and performance while enhancing user experience.
- Led a project to tailor app features for specific customer segments, creating custom views for thousands of users in 10+ states, and ensuring compliance with insurance laws while boosting GEICO customer retention.
- Refactored legacy code from Objective-C to Swift, improving code maintainability and increasing efficiency.
- Authored and optimized unit tests, increasing code coverage by ~20%, covering thousands of lines of codebase.

NeuroNexus Technologies

June 2022 - August 2022

Software Engineering Intern | Ann Arbor, MI

- Developed data conversion algorithms for transfer of neural information from brain probes to proprietary data management systems, enabling researchers to work with diverse neural data sources efficiently.
- Automated local field potential data collection and preprocessing using Python.
- Utilized data exploration techniques to clean and restructure raw neural data, enabling system compatibility.
- Engineered custom software product in Python, Go, and C++, integrating Google protobufs to enable frictionless data exchange between client brain probes and proprietary data management system.

Coding and Physician Reimbursement Analysts, Inc

April 2023 - May 2024

Medical Code Database Specialist | Melbourne, FL

- Maintained medical code databases stored on .xlsx files with over 100,000 entries across 3 districts in Florida.
- Automated the extraction and cleanup of raw data using Python, efficiently creating files for use in litigation.

TEACHING

University of Michigan Department of Computer Science

August 2023 - May 2025

Instructional Aide, EECS 280 (Data Structures) | Ann Arbor, MI

- Conducted weekly labs for ~25 students, providing presentations, hands-on guidance, and live demonstrations.
- Offered personalized and group support through 3 hours of weekly office hours and engagement on Piazza.
- Collaborated with 40-person teaching team to write, test, and grade exams for a class of ~1300 students.

EDUCATION

University of Michigan

May 2025

B.S. in Computer Science, Minor in Sustainability

- GPA: 3.8

Relevant Coursework: DS&A, Web Systems, Cybersecurity, Conversational AI, Operating Systems
